# Mental health conditions affect many people

In light of the increasing awareness of mental health, it's important that we recognise the complexity of these conditions and how they impact people.

According to studies conducted by the Australian Institute of Health and Welfare between 2020 and 2024:

# 1 in 5 Australians

are living with a mental health condition<sup>1</sup>.

## 8.5 million Australians

have experienced a mental disorder at some time in their life<sup>1</sup>.

Despite its growing prevalence, many Australians living with a mental health condition may have limited access to regular treatment or may not be receiving evidence-based care.

# Anxiety

is the most common mental health condition, affecting **17%** of the population<sup>1</sup>.

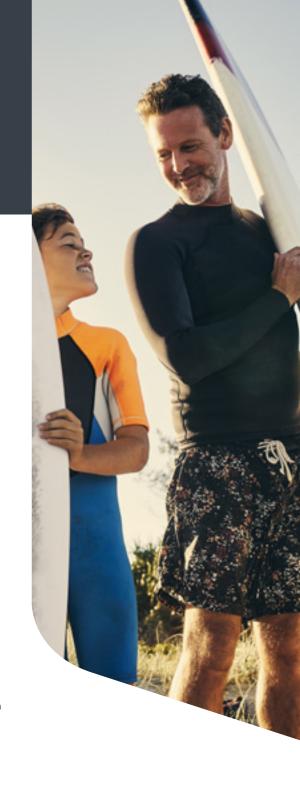

## 5 million Australians

filled a mental health-related prescription in 2023–24<sup>2</sup>.

# 2.2 million Australians

living with a mental health condition and experiencing symptoms did not see a health professional, according to a study conducted by the Australian Bureau of Statistics<sup>3</sup>.
